DISC GOLF COURSE DESIGNERS

“Pursuing excellence in disc golf course design to serve players of all ages and skill levels”

KEY DESIGN PRINCIPLES

bring **trees** into play for shade, shot shaping, view framing and risk-reward

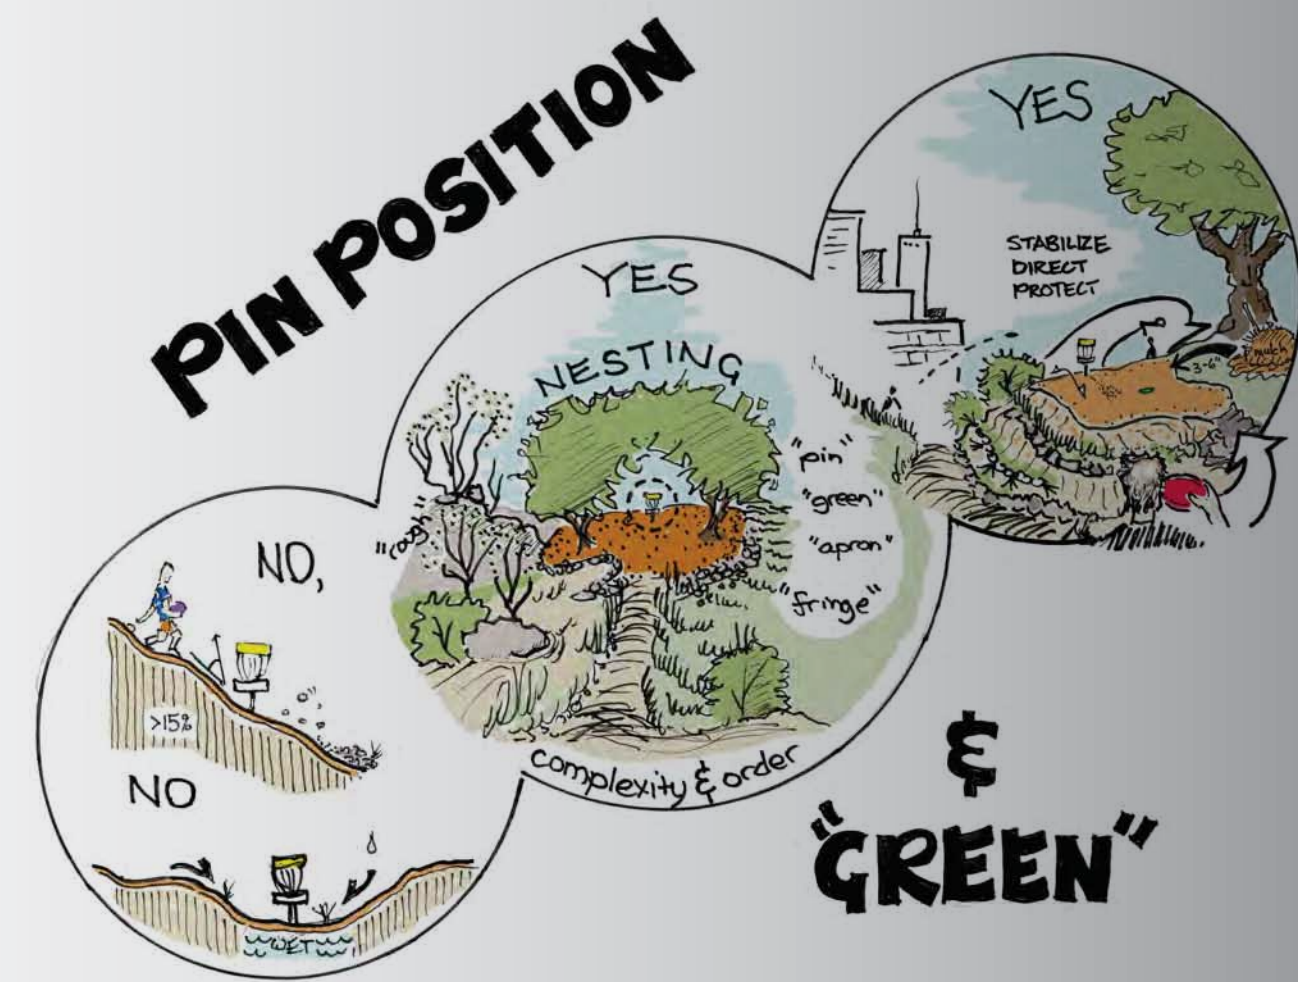

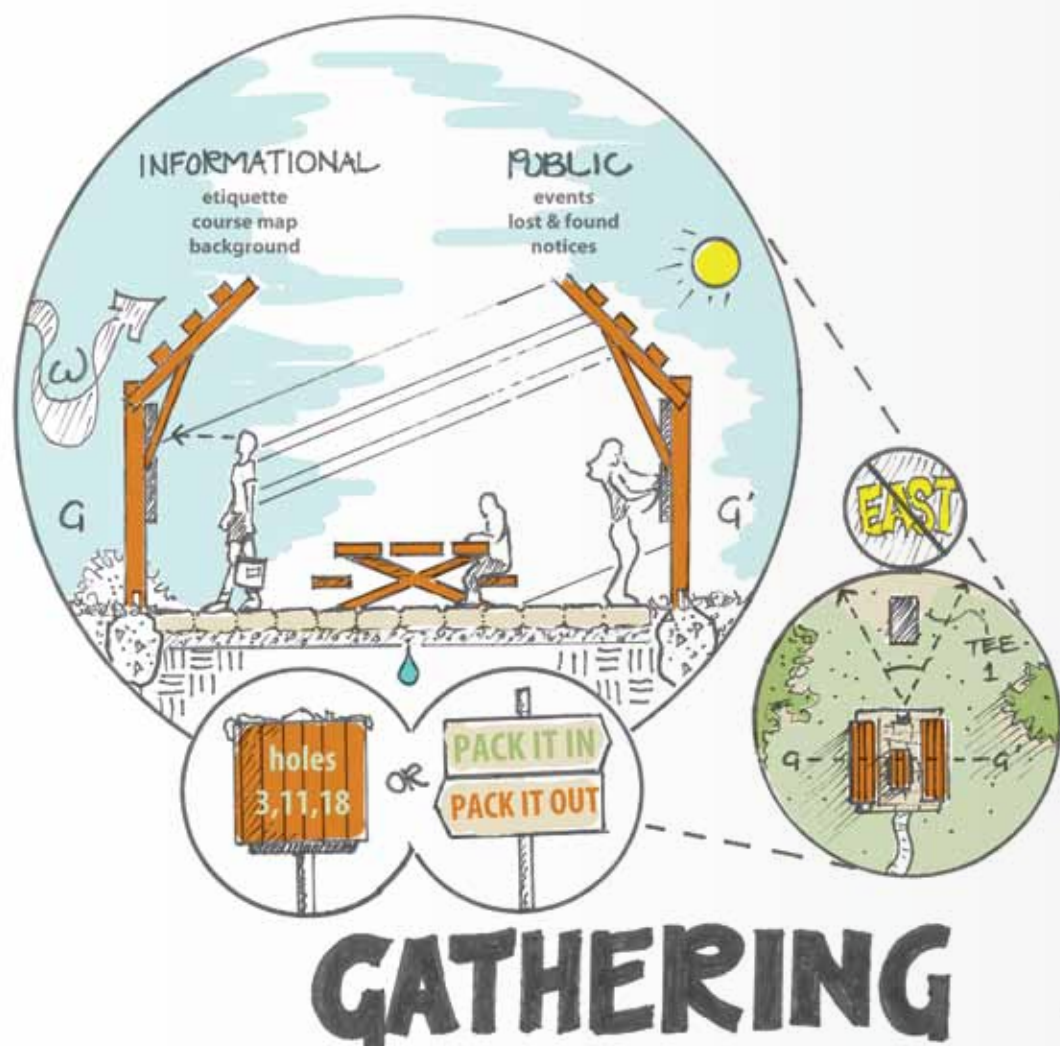

layout to facilitate gradual climbs and descents to enhance course flow, orientation & overall course experience

avoid walking down to throw up

logical and welcoming **arrival** experience

buffer between roads, fairways and residential to ensure safety, course-flow, conservation and respect privacy

develop rest **nodes** for course-pacing, comfort, interpretation and player interaction

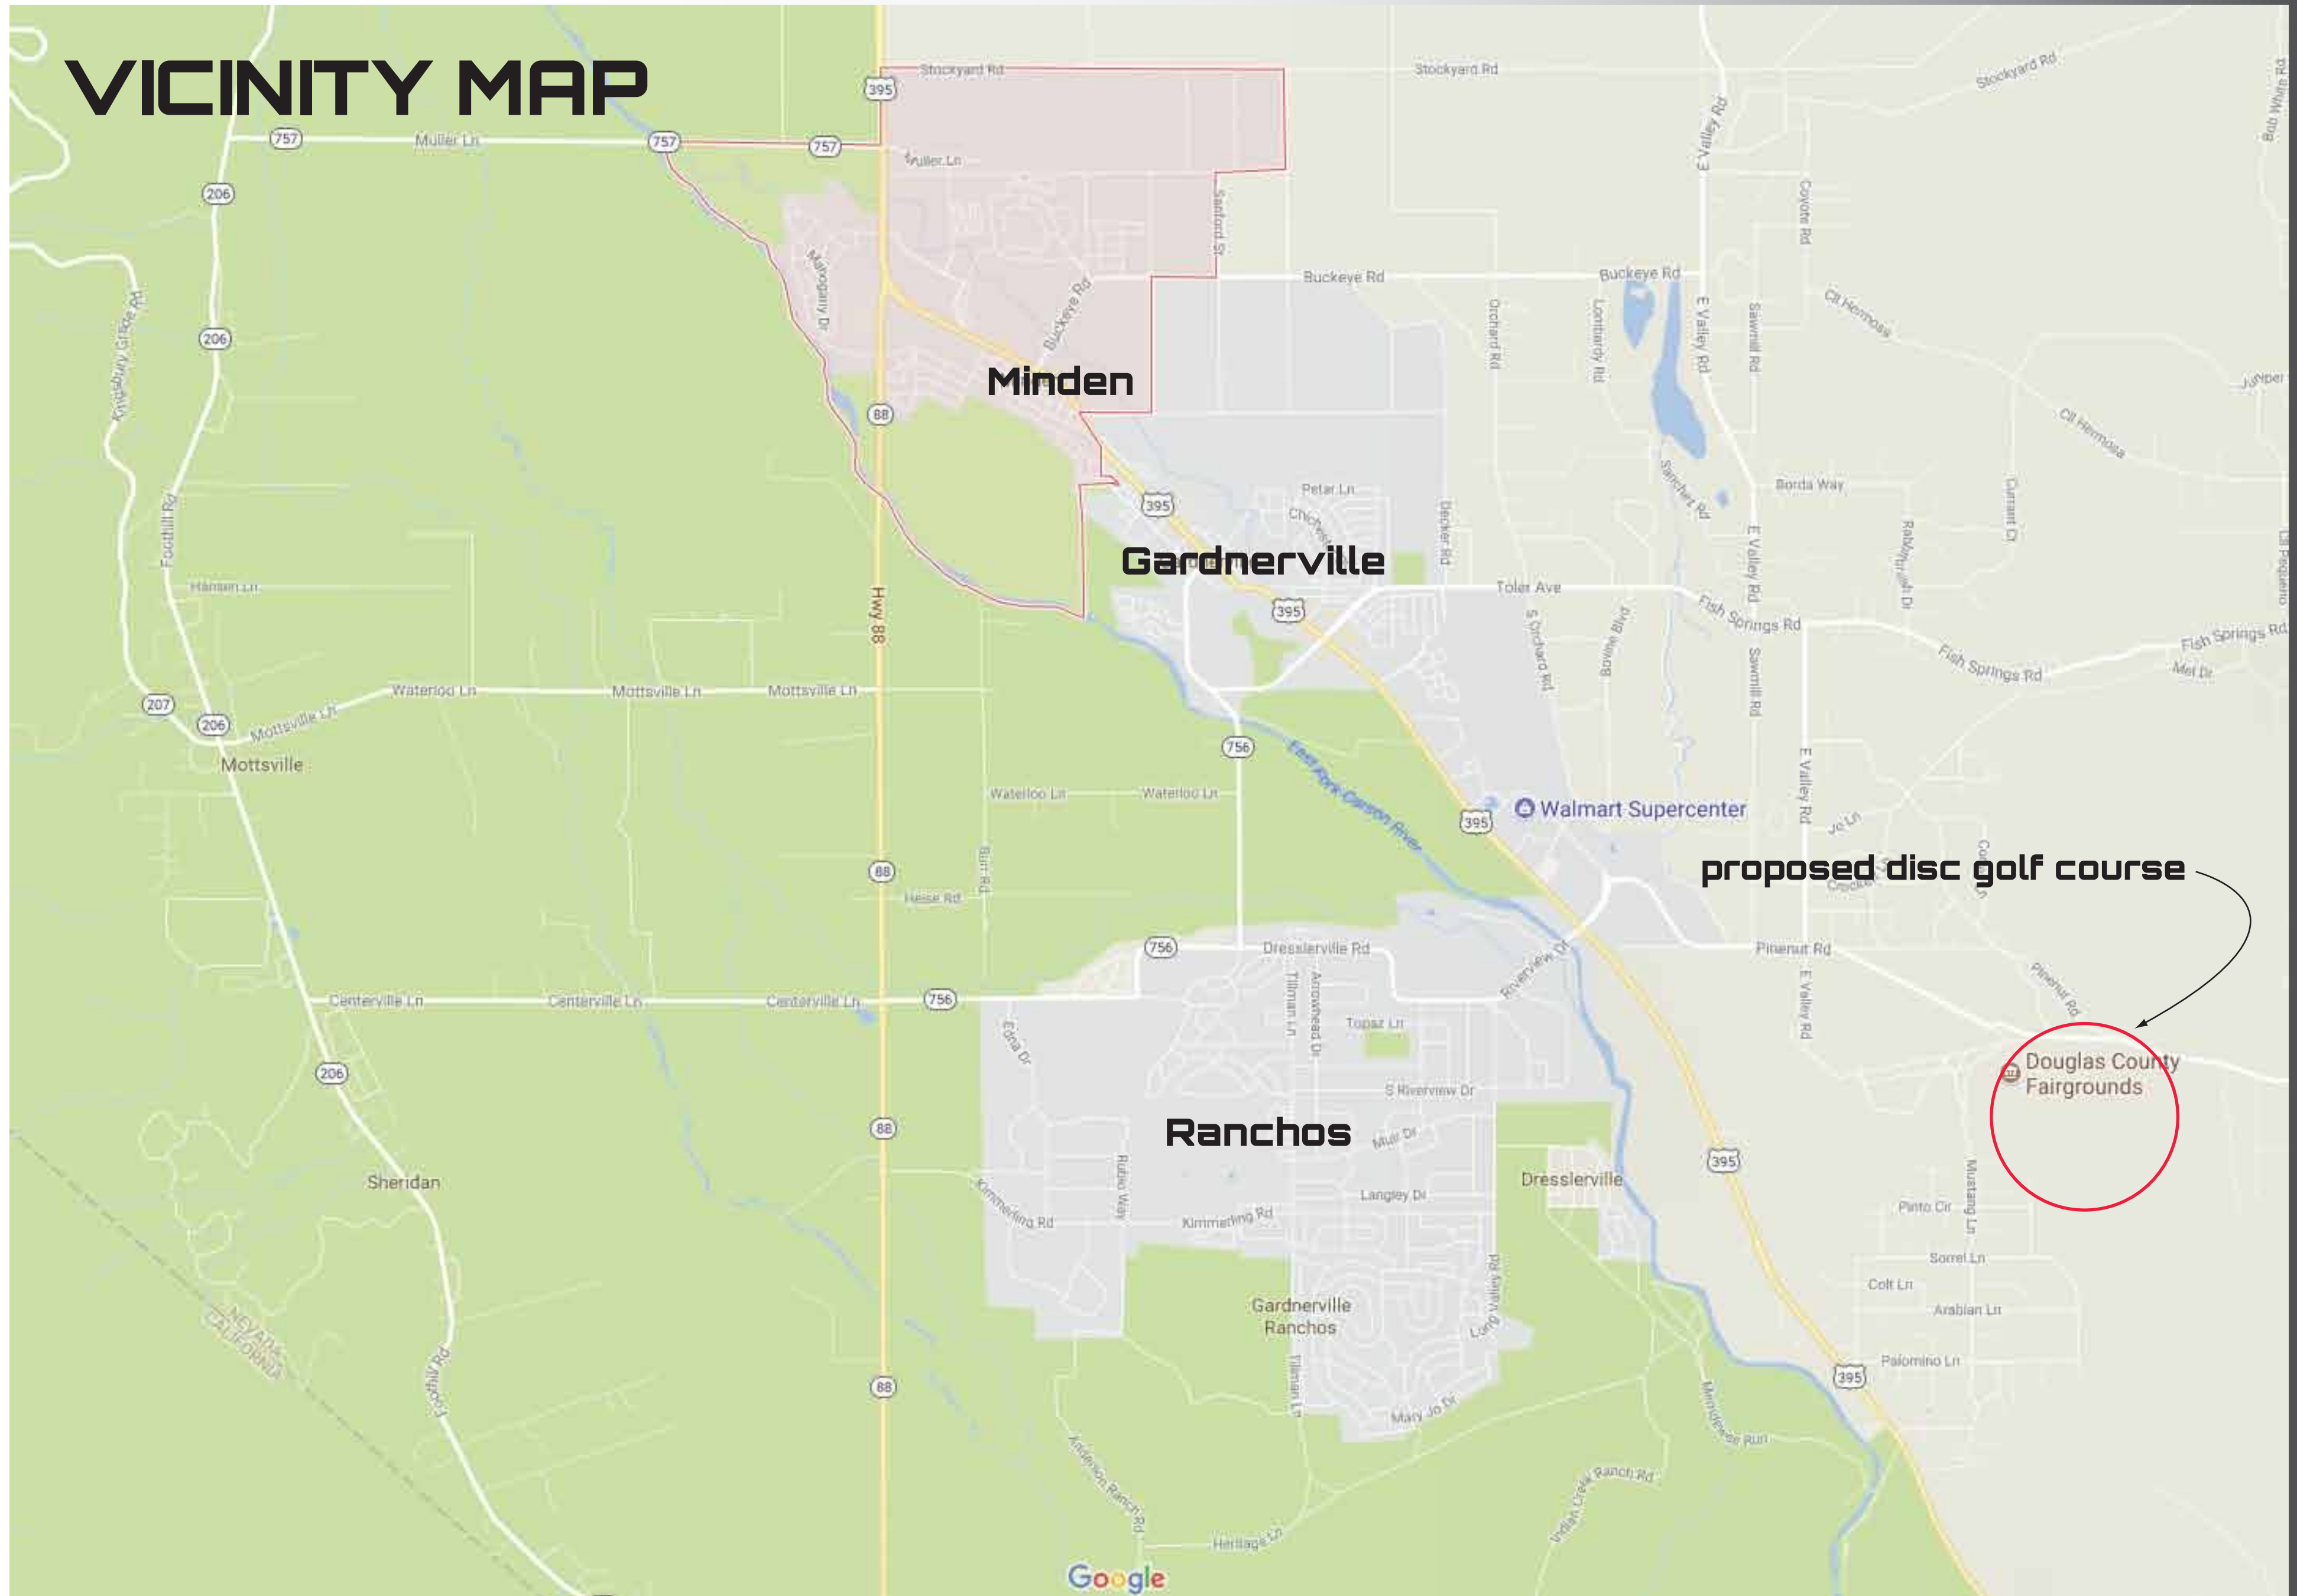

interpret unique natural and cultural features both onsite and off (long-views) on tee signage to strengthen sense of place & region

connector paths & replayability: renew landscape orientation from pin to tee, preview upcoming holes without revealing entire fairways, vary distance, elevation and shotmaking

create sense of *prospect & refuge* from **tee areas**

mulch: to keep dust down, reward golfers for hitting landing areas with better footing, and improve walkability around green complexes and connector paths
